## [IJPEDS] Editor Decision

---

**Tole Sutikno** <ijpeds@iaesjournal.com>

29 November 2016 22.53

Balas Ke: "IJPEDS, Editor" &lt;ijpeds@iaesjournal.com&gt;

Kepada: saidah Baisa &lt;saidah@ubhara.ac.id&gt;

Cc: bambang purwahyudi &lt;bmp\_pur@ubhara.ac.id&gt;, Kuspijani - &lt;anikubhara@gmail.com&gt;

saidah Baisa:

We have reached a decision regarding your submission to International Journal of Power Electronics and Drive Systems (IJPEDS), "Control Strategy for PWM Voltage Source Converter Using Fuzzy Logic for Adjustable Speed DC Motor".

Our decision is revisions required

Please read our instructions (at:

<http://iaesjournal.com/online/index.php/IJPEDS/about/editorialPolicies#custom-4>)

carefully and follow the "checklist for preparing your paper for publication" strictly, as any spelling mistakes and errors may be translated into the typeset version.

### MOST IMPORTANT:

- \* The process publication will be smooth and fast only if you have prepared your revised paper carefully and strictly with considering the checklist above.

- \* You should improve your "result and discussion" section, and present the comparison between performance of your approach/method/algorithm/frame-work (or your critical analyses) to other researches. The "result and discussion" section reports the most important findings, including analysing results as appropriate.

- \* All references must be cited in your article, and CITATION ORDER is SEQUENTIAL [1], [2], [3], [4], .....

- \* The references must be integrated also with not less than two papers published on IAES's Journals. You can find the issued at:

- <http://journal.portalgaruda.org/index.php/index> (please use "Search" at menu "Journal Content" in right side of the site)

- <http://section.iaesonline.com> (please use "Search" at menu "Journal Content" in right side of the site)

- <http://iaesjournal.com> (please use "Search Paper" facility in right top side of the site)

Submit your revised paper through our online system as explained at <http://iaesjournal.com/ourfiles/Guide%20for%20authors%202015.docx> or by email to: [ijpeds@iaesjournal.com](mailto:ijpeds@iaesjournal.com) (please inform your "paper ID" if you submit your revised by email)

When your revised paper reached us, it will be evaluated by anonymous referees for contribution, originality, relevance, and presentation. Your papers will be sent for anonymous review by at least two reviewers who will either be members of the Editorial Board or others of similar standing in the field. In order to shorten the review process you should submit your revised paper within 8 weeks.

Then, your paper will be judged: accepted or rejected.

Thank you,

Sincerely yours,

T. Sutikno

Editor

## [IJPEDS] #13107 Control Strategy for PWM Voltage Source Converter Using Fuzzy Logic for Adjustable Speed DC Motor

IJPEDS Journal &lt;ijpeds@iaesjournal.com&gt;

10 Februari 2017 07.11

Kepada: Saidah Ubhara &lt;saidah@ubhara.ac.id&gt;

Dear Dr. Saidah,

It is my great pleasure to inform you that after careful review by several reviewers your paper is ACCEPTED and will be published for forthcoming issue of the International Journal of Power Electronics and Drive Systems (IJPEDS), a Scopus indexed journal.

The IJPEDS (a SCOPUS indexed Journal) is an OPEN ACCESS Journal which is the official publication of the Institute of Advanced Engineering and Science (IAES). Benefits of the OPEN ACCESS policy:

- Researchers as authors: immediate visibility for research output and thus increased visibility and usage of their results. Open Access may even lead to an increase of impact.
- Researchers looking for information: access to literature everywhere, not only from a campus but also from any site with wifi access.
- Funding agencies: increased return on investment (ROI), increased visibility.
- Universities & research institutes: greater visibility, clearer management information.
- Libraries: increased access for target audience, financially a more attractive model than the current subscription model.
- Teachers & students: unrestricted access to material, enriched education, allowing equality of learning in poor as well as in rich nations.
- Science: enhanced and accelerated research cycle.
- Citizens & society: access to knowledge / access to the results of publicly funded research.
- Enterprises: access to critical information.
- Publishers: transparent business model, ultimate online article distribution, ultimate visibility for articles.

To support the cost of wide open access dissemination of research results, to manage the various costs associated with handling and editing of the submitted manuscripts, and the Journal management and publication in general, the authors or the author's institution is requested to pay a publication fee for each article accepted.

Each accepted paper will be charged: USD 190

This charge is for the first 8 pages, and if any published manuscript over 8 pages will incur extra charges USD45 per page

(<http://www.iaesjournal.com/online/index.php/IJPEDS/about/submissions#authorFees>)

If you have paid your publication fee, please submit your payment receipt to email: [IJPEDS@iaesjournal.com](mailto:IJPEDS@iaesjournal.com)

If you don't yet pay your publication fee, the payment should be made by bank transfer (T/T):

-----  
Bank Account name (please be exact)/Beneficiary: TOLE SUTIKNO

Bank Name: Bank Mandiri, KCP Yogyakarta UGM

City: Yogyakarta

Country : Indonesia

### ABSTRACT

The speed of a DC motor can be controlled by providing a DC input voltage that varies at the input terminals. It can be done by controlling a PWM-VSC (PWM-Voltage Source Converter). This paper analyzes an control strategy of PWM-VSC using fuzzy logic to obtain varying DC voltage and according to the DC motor speed as desired. The control strategy of PWM-VSC directly using the switch variable in dq rotating reference frame as input variables obtained from SVPWM (Space vector Pulse Width Modulation) methode. The fuzzy logic controller proposes to get a DC voltage variation stable by adjusting amplitudo of the network current. The simulation Fuzzy Logic Controller results show that the design fuzzy logic produce a good dynamic of DC voltage and DC motor speed without overshoot. On the network, Total Harmonic Distortion less than 5 % and unity power factor.

## 1. INTRODUCTION

DC motors are one type of electric motor that is widely used in industry for adjustable-speed drive. Speed control of a DC motor can be done in several ways, e.g, by regulating the armature voltage (DC voltage). Regulating the armature voltage can directly be used to adjust the speed of motor at the time of starting and running. Controlling the DC voltage becomes easier and more efficient to use a PWM-VSC is to set duty cycle [1].

The previous researchers have concerned about DC motor speed control using PWM strategy in [2]-[4]. But use of PWM to control speed of DC Motor will produce current harmonics on the network and unstable of the DC voltage as a DC supply for DC Motor.

They have developed several strategies in order to control PWM on PWM-VSC. Controllers based on PID controllers with regulating the DC voltage and current harmonics in the network. PID controllers were considered as simple and cheap of implementation [5]-[7]. One of disadvantage in using PID controller was using of off-line tuning algorithm and very difficult to use in conditions of varying DC voltage.

Things that need to be observed that the PWM-VSC is a nonlinear system. The nonlinear impacts of PWM-VSC are not expected, for example, current harmonics (THD currents), the low value of power factor on the AC side , the DC voltage becomes unstable and occur ripples on the DC side so that is required proper controller that can compensate them. To solve this, the artificial intelligent control, such as Fuzzy logic control, neural network (NN, RNN) are very promising for the identification and control of nonlinear dynamical systems [7]-[10]. Fuzzy logic controller is an intelligent control that has a simple structure and having an adaptive process causes the PWM-VSC to get better performance despite a change in parameters due to changes in motor speed varies. The fuzzy controller has a wide range to get the variations of the DC voltage.

In this paper, the fuzzy logic controller proposed to obtain the variation of the DC voltage to adjustable-speed drive and overcome impacts of PWM-VSC that not expected. The Fuzzy Logic controller was to minimize error DC voltage to the reference value with regulating variation of current amplitude in the network. Hence, a regulated variation of network current amplitude was obtained with a low harmonic distortion of the network current, to obtain a DC voltage variation stable, unity power factor.

## NOMENCLATURE

$v(t)$	= PWM-VSC Input Voltages
$i(t)$	= PWM-VSC Input Current
$i^*(t)$	= Complex Conjugate of $i(t)$
$e(t)$	= Input Network Voltages
$i_o(t)$	= PWM-VSC Output Current
$i_c(t)$	= Capacitor Current
$i_L(t)$	= Load Current
$s(t)$	= Switch variable
$v_o(t)$	= Output Voltage or DC Voltage
$K_b$	= Back Emf Constant
$R_a$	= Armature Resistance
$I_a$	= Armature Current
$V_a$	= Armature Voltage
$\omega_m$	= Angular Velocity

## 2. THE PROPOSED CONTROL STRATEGY

The speed of a DC motor can be controlled by providing a DC input voltage that varies at the input terminals. The control strategy to get variation of the DC voltage based on SVPWM for three phase of PWM-VSC and uses switching variable in d-q frame ( $s_d, s_q$ ) as input instead of voltage ( $v_d, v_q$ ) or current ( $i_d, i_q$ ) that are often used. The system also used a fuzzy logic controller to control the amplitude of the network current based on the error and delta error of the DC voltage. Therefore, a regulated variation of network current amplitude will obtained a low Total harmonic distortion of the network current, a DC voltage variation stable, unity power factor, low ripple. The Fuzzy Control Proposed was showed in Figure 1.

Figure 1. Block diagram of the Propose controller

## 3. MODELLING OF THE SYSTEM

### 3.1. Modelling of the DC Motor

A DC motor consists of stator and armature winding in the rotor as shown in Figure 2. A DC voltage from the output of PWM-VSC is as input voltage of the armatur winding that causes a DC current to flow in the winding. This kind of machines is preferred over AC machines in high power application, because of the case control of the speed and the direction of rotation of large DC motor. The filed circuit of the motor is exciting by a constant source. The steady state speed of the motor can be described as [11]:

$$\omega_m = \frac{V_a - I_a R_a}{K_b} \quad (1)$$

becomes constant, and the torque becomes directly proportional to the armature current so that

$$T_m = K I_a \quad (2)$$

Where  $K$  is a motor torque constant. When the armature is rotating, a voltage proportional to the product of the flux and angular velocity is induced in the armature. For a constant flux, the induced voltage  $e_b$  is directly proportional to the angular velocity  $\omega_m$ . Thus

$$e_b = K_b \omega_m \quad (3)$$

Figure 2. Permanent Magnet DC Motor

Where  $K_b$  is a back emf constant.

The armature current produces the torque which is applied to the inertia and friction. Now the torque balance equation will be given by [12].

$$T_m = J_{eq} d\omega_m/dt + B_m \omega_m + T_d \quad (4)$$

Assuming that all initial conditions are zero and taking the Laplace Transforms of equation (2)–(4), we obtain the following equations :

$$e_b(s) = K_b \omega_m(s) \quad (5)$$

$$V_a(s) = L_a(s) + R_a I_a(s) + e_b(s) \quad (6)$$

$$T_m(s) = J_{eq} s \omega_m(s) + B_m \omega_m(s) \quad (7)$$

From equations (5)–(7) the transfer function of this system is obtained as

$$\frac{\omega_m(s)}{V_a(s)} = \frac{K}{(L_a J_{eq} s^2 + (L_a B_m + R_a J_{eq})s + R_a B_m + K K_b)} \quad (8)$$

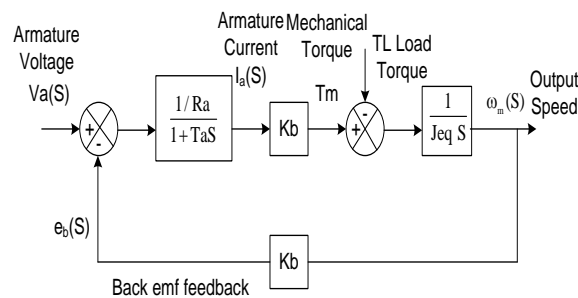

Figure 3. Modelling Block diagram of DC Motor

Table 1. Parameters of the DC Motor

Description of the parameter	Parameter value
Resistance of Armature ( $R_a$ )	0.55 $\Omega$
Inductance of Armature ( $L_a$ )	0.025 H
Mechanical inertia ( $J_{eq}$ )	0.1 Kg.m <sup>2</sup>
Friction coefficient ( $B_m$ )	0.009 N.m/rad/sec
Constant of Back emf ( $k$ )	1.28 V/rad/sec
Constant of Motor torque	1 N.m/A

### 3.2. Mathematical Model of the System

Figure 4 describes a system, has a three-phase PWM-VSC with DC motor load. The System of PWM-VSC has a three-phase network have connection b three-phase supply voltage  $e_a$ ,  $e_b$ ,  $e_c$ , three R-L impedances, the three-phase input network currents  $i_a$ ,  $i_b$ ,  $i_c$  and the three-phase voltages generated by the PWM-VSC  $v_a$ ,  $v_b$ ,  $v_c$ , a DC capacitor, and the DC motor load. A system can be explained on the stationary frame in using space vectors.

Figure 4. Topology of Three Phase PWM-VSC

The mathematical equations of the three-phase system have three components that is  $x_a(t)$ ,  $x_b(t)$  dan  $x_c(t)$  can be wrote in space vectors was as [13]:

$$x(t) = 2/3[x_a(t) + a x_b(t) + a^2 x_c(t)] \quad (9)$$

Where  $a = e^{j2\pi/3}$

This equation of the PWM-VSC was explained in space vector:

$$V(t) = e(t) - R i(t) - L di(t)/dt$$

$$V(t) = 1/2 S(t) V_o(t) \quad (10)$$

$$i_o(t) = 3/4 \text{Re}\{S(t) i^*(t)\}$$

$$i_c(t) = C dv_o/dt = i_o(t) - i_L(t)$$

The mathematical system can be wrote in state space as

$$dV_o(t)/dt = 1/C\{3/4 \text{Re}\{S(t) i^*(t)\} - i_L(t)\} \quad (11)$$

$$di(t)/dt = 1/L[-Ri(t) + e(t) - 1/2 S(t) V_o(t)] \quad (12)$$

The both equation in (11), (12) described that the system was nonlinear equation and its action depended upon the switch variable  $S(t)$ . From equation (12), the voltage on R can be ignored so that value of switching variable  $S(t)$  could be calculated from equation (13)

$$S(t) = 2/V_o(t)[e(t) - L di(t)/dt] \quad (13)$$

Thus it appears that the control strategy to obtain DC voltage variation based on SVPWM for three phase of PWM-VSC and uses switching variable in d-q frame ( $s_d$ ,  $s_q$ ) as input.

### 3.3. Fuzzy Logic Controller Design for Three Phase PWM-VSC

Fuzzy Logic Controller is an intelligent control that has a simple structure and have adaptive process causes performance to be better though parameter changes occur due to changes in variation motor speed. Figure 5 is a block diagram fuzzy logic controller of three phase of PWM-VSC. The fuzzy has two input variables, the error between the reference and the measured value of the DC voltage is the first input variable. The variation of this error is the second input variable. The two variables are represented by :

$$e(k) = V_{dref}(k) - V_{dc}(k)$$

$$\Delta e(k) = e(k) - e(k-1)$$

$$\Delta I(k) = I(k) - I(k-1)$$

Figure 5. Fuzzy Logic Control Block Diagram

The output variable of fuzzy logic is variation of network current amplitude ( $\Delta I_k$ ). Fuzzy logic controller controlled the DC voltage by regulating network current amplitude. Each of input variables has seven triangular membership function, seven triangular membership function for the output, implication using mamdani's min operator, defuzzification using centroid method. The fuzzy control has seven membership functions called from negative big (NB) to positive big (PB). Tabel 2 Shows fuzzy rules table change in control output.

Tabel 2. Fuzzy Rules of  $\Delta I_k$

		$e(k)$						
		NB	NM	NS	ZE	PS	PM	PB
$\Delta e(k)$	NB	NB	NB	NM	NM	NS	NS	ZE
	NM	NM	NM	NM	NS	NS	NS	PS
	NS	NS	NM	NS	NS	ZE	ZE	PS
	ZE	NS	NS	NS	ZE	PS	PS	PM
	PS	NS	NS	ZE	PS	PS	PS	PM
	PM	NS	ZE	PS	PS	PM	PM	PB
	PB	ZE	PS	PS	PM	PM	PB	PB

### 3.4. Space Vectors of Pulse Width Modulation

Algorithm of Space Vector Pulse Width Modulation can be represented in the form as shown in Figure 6. This algorithm explains the process for obtaining a control signal to the switches variable three phase voltage source converter with a reference switch vector. In general the reference switch is determined from the component d and q of the switching variable.

$$s_d = \frac{2}{v_o} \left\{ E_m - \frac{L}{T_s} \Delta I \right\} \quad (13)$$

$$s_q = \frac{2}{v_o} [-\omega L I] \quad (14)$$

Equation (13), (14) were converted into the  $\alpha$  and  $\beta$  in form stationary frame ( $s_\alpha$  and  $s_\beta$ ). Both of them were used as inputs for SVPWM. Two of the components will be used to determined m state to be activated. The next time state  $T_m$ ,  $T_{m+1}$  and  $T_0$  is calculated from the difference between the sampling time

$T_s$  and  $(T_m + T_{m+1})$ . Switching signal can be determined after the sector  $m$ , an active state time  $T_m$  and  $T_m + 1$ , a state-zero  $T_0$  obtained.

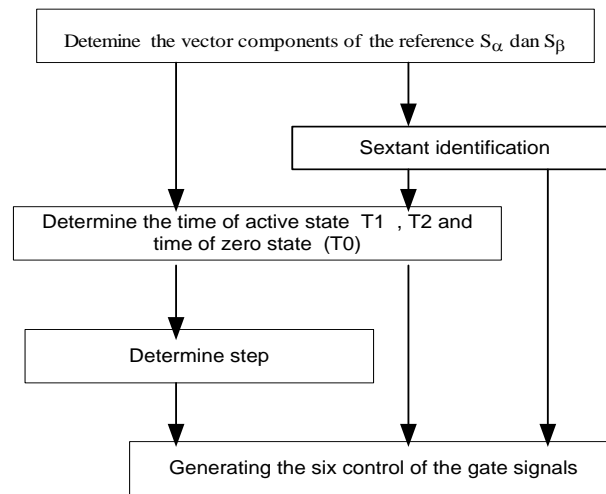

Figure 6. Algorithm of Space Vector Pulse Width Modulation [14]

#### 4. RESULT AND ANALYSIS

The proposed controller of three phase PWM-VSC was evaluated through several simulations. The output voltage of three phase PWM-VSC are used as DC voltage sources of DC Motor. The fuzzy logic controller performance was showed in form simulations with Matlab which have data  $E_m = \sqrt{2} \cdot 220\text{volt}$ ,  $V_{dc} = 650\text{ volt}$ ,  $\omega = 2\pi \times 50\text{ rad/s}$ ,  $R = 0.5\ \Omega$ ,  $L = 6\text{ mH}$ ,  $C = 1100\ \mu\text{F}$ .

Figure 7 presents the DC voltage of PWM-VSC with fuzzy logic controller. The simulation results showed the DC voltage has a ripple equal to 0.35% without overshoot as well [7] generate a DC voltage without overshoot for fuzzy logic controller and have the overshoot for the PI Controller. Observations were also performed on the network side, voltage and current have the same phase, has a power factor close to unity ( $\text{Pf} = 0.9984$ ) and has a sinusoidal current waveform. THD value of current equal to 3.844%, whereas in [6] THD value is  $> 4\%$  and has network current not sine. Current and voltage waveforms are shown in Figure 8.

Figure 7. The DC Voltage source for DC Motor

Figure 8. demonstrates the grid phase voltage and network phasa current

Figure 9 shows the results simulations of error of DC voltage vs time response. Simulation results showed stable DC voltage at  $t = 0.05\text{ Sec}$ . The simulation output of the speed of the DC Motor vs time response is in Figure 10. The performance of the speed showed stable at time 0.1 seconds.

In this simulation, we observed the motor's behavior by varying the values of the DC Voltage. Figure 11 demonstrates under various values of the DC voltage without overshoot, not so [9] changes the DC voltage value causing overshoot. In Figure 12 shows speed variation of the DC Motor vs time response for voltage variation in Figure 11 and denotes the stability of speed of the DC Motor. In this condition THD = 4.241, Pf = 0.998.

Figure 9. Error of DC voltage vs Time Response with Fuzzy Logic

Figure 10. Speed vs Time Response of DC Motor

Figure 11. Voltage variation of the DC Voltage vs Time response

Figure 12. Speed variation of the DC Motor vs Time Response for voltage variation in Figure 11

#### 4. CONCLUSION

The steady state operation and its various DC voltage, network harmonics and power factor, and various torque-speeds of DC motor are studied. This project introduces a design method of two inputs and one output fuzzy controller and make use of MATLAB fuzzy toolbox to design fuzzy controller. The simulation result showed stable DC voltage without ripple, overshoot and steady state at 0.05 second. THD less than 5 % and a power factor close to unity. Speed of DC motor showed stable and no oscillations.

#### ACKNOWLEDGEMENTS

Firstly, the authors would like to pay their respectfully thanks to God, their beloved family, teachers and their admirer supervisor. Special thanks to the Directorate General of Higher Education of Republic of Indonesia through Coordination of Public Higher Education in Fundamental Skim, Regional VII, East Java that has provided supporting and funding for this research.

Kepada: Saidah Ubhara &lt;saidah@ubhara.ac.id&gt;

Dear Dr. Saidah,

It is my great pleasure to inform you that after careful review by several reviewers your paper is ACCEPTED and will be published for forthcoming issue of the International Journal of Power Electronics and Drive Systems (IJPEDS), a Scopus indexed journal.

The IJPEDS (a SCOPUS indexed Journal) is an OPEN ACCESS Journal which is the official publication of the Institute of Advanced Engineering and Science (IAES). Benefits of the OPEN ACCESS policy:

- Researchers as authors: immediate visibility for research output and thus increased visibility and usage of their results. Open Access may even lead to an increase of impact.
- Researchers looking for information: access to literature everywhere, not only from a campus but also from any site with wifi access.
- Funding agencies: increased return on investment (ROI), increased visibility.
- Universities & research institutes: greater visibility, clearer management information.
- Libraries: increased access for target audience, financially a more attractive model than the current subscription model.
- Teachers & students: unrestricted access to material, enriched education, allowing equality of learning in poor as well as in rich nations.
- Science: enhanced and accelerated research cycle.
- Citizens & society: access to knowledge / access to the results of publicly funded research.
- Enterprises: access to critical information.
- Publishers: transparent business model, ultimate online article distribution, ultimate visibility for articles.

To support the cost of wide open access dissemination of research results, to manage the various costs associated with handling and editing of the submitted manuscripts, and the Journal management and publication in general, the authors or the author's institution is requested to pay a publication fee for each article accepted.

Each accepted paper will be charged: USD 190

This charge is for the first 8 pages, and if any published manuscript over 8 pages will incur extra charges USD45 per page

(<http://www.iaesjournal.com/online/index.php/IJPEDS/about/submissions#authorFees>)

If you have paid your publication fee, please submit your payment receipt to email: [IJPEDS@iaesjournal.com](mailto:IJPEDS@iaesjournal.com)

If you don't yet pay your publication fee, the payment should be made by bank transfer (T/T):

Bank Account name (please be exact)/Beneficiary: TOLE SUTIKNO

Bank Name: Bank Mandiri, KCP Yogyakarta UGM

City: Yogyakarta

Country : Indonesia

Bank Account # : 1370003247703

SWIFT Code: BMRIDJAXXX

or, if you have PayPal account, it's easy for you just send your payment to email: [info@iaesjournal.com](mailto:info@iaesjournal.com)

Please submit your payment receipt to [IJPEDS@iaesjournal.com](mailto:IJPEDS@iaesjournal.com) within 3 weeks, and inform your detailed address for hardcopy delivering.

Your cooperation is very appreciated.

Best Regards,

Tole Sutikno

Editor-in-chief

Dear Mr. Tole Sutikno

I have paid publications fee. and submit my payment received in attachment file.  
Is this payment of \$190 already include journal book ?  
Thanks for your attention

Best Regard  
Saidah

Dear Authors and Reviewers,

We confirm that your email reached us.

**International Journal of Power Electronics and Drive Systems** (IJPEDS, ISSN: 2088-8694, a **SCOPUS** indexed Journal) is the official publication of the Institute of Advanced Engineering and Science (IAES). The scope of the journal includes all issues in the field of Power Electronics and drive systems. Included are techniques for advanced power semiconductor devices, control in power electronics, low and high power converters (inverters, converters, controlled and uncontrolled rectifiers), Control algorithms and techniques applied to power electronics, electromagnetic and thermal performance of electronic power converters and inverters, power quality and utility applications, renewable energy, electric machines, modelling, simulation, analysis, design and implementations of the application of power circuit components (power semiconductors, inductors, high frequency transformers, capacitors), EMI/EMC considerations, power devices and components, sensors, integration and packaging, applications in motor drives, wind energy systems, solar, battery chargers, UPS and hybrid systems and other applications.

**Authors should submit only papers that have been carefully proofread and polished.** Before submission please make sure that your paper is prepared using the **journal paper template <<MS Word or Latex>>**. This will ensure fast processing and publication. Any papers not fulfilling the requirements based on the guideline to authors will not be processed.

IJPEDS guide --> <http://db.tt/gFyf7GsQ>  
IAES Journal checklist --> <http://db.tt/ORZvCe3x>  
LATEX Template --> <http://db.tt/YChYJgUu>

**Please submit your papers ONLY through our online system.**

To make a submission, you must have a user account and **be enrolled as an Author**. User accounts can either be created by the Journal Manager or you can register yourself (this journal policy allow you create user account by your self as a Reader, an Author and/or a Reviewer). All fields with an asterisk beside them (Username; Password; Repeat Password; First Name; Last Name; Email) are mandatory. Your username and your email address must be unique; furthermore, while you can change your email address at a later date, you will be unable to change your username. If you want to register in another role within the same journal (for example, if you are already a Reader, but also want to become an Author) you can log in; go to Edit My Profile (under My Account on your User Home page); and check off the checkboxes next to any available roles, near the bottom of the page. Once you have an account, log in to the journal site and select the role of Author.

## Online Submissions

Already have a Username/Password for International Journal of Power Electronics and Drive Systems (IJPEDS)?  
[Go to Login](#)

Need a Username/Password?  
[Go to Registration](#)

Registration and login are required to submit items online and to check the status of current submissions.

Your cooperation is very appreciated.

Best Regards,  
IJPEDS Editorial Office

### IMPORTANT:

- Introduction section: explain the context of the study and state the precise objective. The authors also should describe the real problem existing (supported by the important or most recent references) in order to satisfy the criteria of this scientific journal which has to introduce any novelties, improvement etc from the research work prior to the problem solving done or proposed by the author as a significant contribution.
- Results and discussion section: The presentation of results should be simple and straightforward in style. You should improve your analyzing and also present the comparison between performance of your approach and other researches. Results given in figures should not be repeated in tables. This section report the most important findings, including results of statistical analyses as appropriate. It is very important to prove that your manuscript has a significant value and not trivial.
