Real Work Lecture (KKN) is a form of community service by students with a cross-scientific and sectoral approach at certain times and regions. KKN is one of the mandatory requirements for being able to be declared to pass the lecture bench. this makes KKN compulsory for students, because KKN activities are community service activities. Students are obliged to apply the knowledge they get in the lecture bench to be applied in the community. In this study a management information system was designed using the Codeigniter PHP framework programming language, MySQL. With this system, it is expected to be able to overcome the various needs of users ranging from registration of KKN to implementation. and facilitate the KKN committee in monitoring up to making reports. From the results of the research that has been carried out the author implements the results of the study into the Design of Management Information Systems for Real Work University of Bhayangkara Surabaya. The results that have been achieved are that this program is suitable for use in the Bhayangkara University (KKN) real work lecture activities (KKN). Errors or omissions made by the user can be overcome by the system.

Keywords: KKN, PHP framework Codeigniter, MySQL, Information Systems, management, registration, implementation.
